

## Toronto\_60435\_2019\_Day187to193.csv

The results below are what the student results should look like for the Toronto\_60435\_2019\_Day187to193.csv dataset used in CHM 135 Experiment 1.

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O<sub>3</sub> vs. NO<sub>2</sub>; the equation of the line is displayed in the lower left corner.

| Pollutant | mean | sd   | median | min | max |
|-----------|------|------|--------|-----|-----|
| NO2       | 11.1 | 9.2  | 8      | 0   | 45  |
| O3        | 24.5 | 14.1 | 23     | 1   | 60  |
| OX        | 35.6 | 11.9 | 34     | 16  | 65  |
| NO2_8hr   | 11.2 | 7.7  | 9      | 0   | 38  |
| O3_8hr    | 24.6 | 12.5 | 22     | 4   | 57  |
| OX_8hr    | 35.8 | 11.2 | 35     | 17  | 62  |

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

### Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values, they may have used the *STDEV.P* function rather than *STDEV.S* in Excel calculations. Do not subtract points, but make a note of it.
