

## Toronto\_60435\_2019\_Day8to14.csv

The results below are what the student results should look like for the Toronto\_60435\_2019\_Day8to14.csv dataset used in CHM 135 Experiment 1.

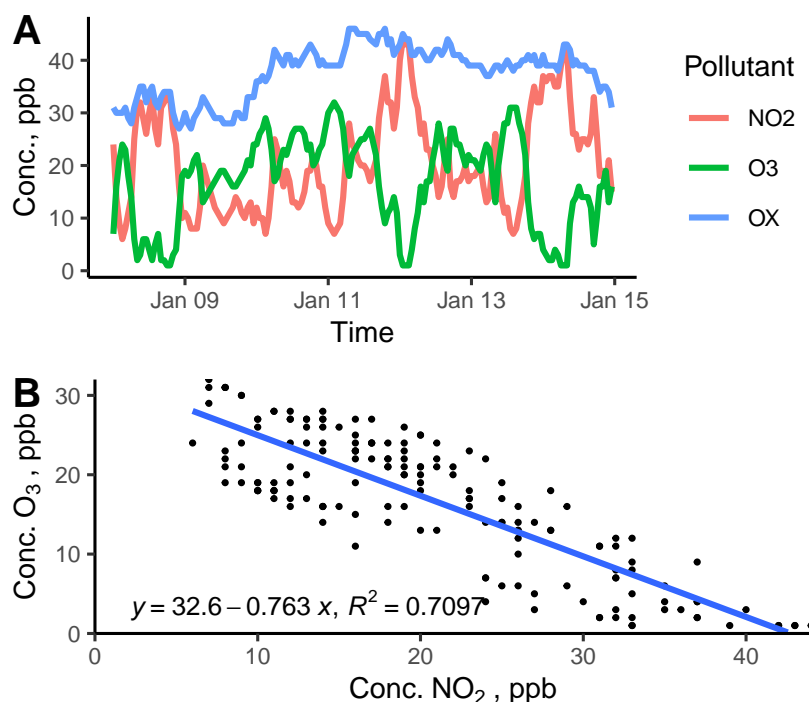

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O<sub>3</sub> vs. NO<sub>2</sub>; the equation of the line is displayed in the lower left corner.

Pollutant	mean	sd	median	min	max
NO <sub>2</sub>	20.7	9.4	19	6	44
O <sub>3</sub>	16.8	8.5	18	1	32
OX	37.5	5.1	39	27	46
NO <sub>2</sub> _8hr	20.9	8.2	18	10	39
O <sub>3</sub> _8hr	16.9	7.7	18	2	29
OX_8hr	37.7	4.9	39	28	45

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

### Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values, they may have used the *STDEV.P* function rather than *STDEV.S* in Excel calculations. Do not subtract points, but make a note of it.
