Toronto_60435_2019_Day184t0190.csv

The results below are what the student results should look like for the Toronto_60435_2019_Day184to190.csv dataset used in CHM 135 Experiment 1.

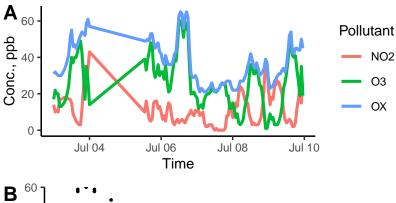

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O₃ vs. NO₂; the equation of the line is displayed in the lower left corner.

Conc. O ₃ , ppb B	60 - 50 - 40 - 30 - 20 -	<i>y</i> = 35.9	- 0.895 <i>x</i> ,	R ² = 0.2094	•••		•

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values, they may have used the *STDEV.P* function rather than *STDEV.S* in Excel calculations. Do not substract points, but make a note of it.
