## Toronto\_60435\_2019\_Day11t017.csv

10

The results below are what the student results should look like for the Toronto\_60435\_2019\_Day11to17.csv dataset used in CHM 135 Experiment 1.

20

Conc. NO<sub>2</sub> , ppb

30

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O<sub>3</sub> vs. NO<sub>2</sub>; the equation of the line is displayed in the lower left corner.

Pollutant	mean	sd	median	min	max
NO <sub>2</sub>	22.7	10.6	20	7	49
O <sub>3</sub>	16.7	8.8	18	О	32
OX	39.4	4.8	40	28	53
NO2_8hr	23.0	9.4	20	8	46
O3_8hr	16.4	7.6	18	1	29
OX_8hr	39.4	4.5	40	29	48

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

## Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values, they may have used the *STDEV.P* function rather than *STDEV.S* in Excel calculations. Do not substract points, but make a note of it.
